PROGRAMMING SKILLS

- **Languages:** JavaScript, TypeScript, Python, HTML/CSS, C
- **Technologies:** React, Node.js, TailwindCSS, Next.js, Express.js, FastAPI, Git, GitHub, REST APIs
- **DB and DevOps:** Supabase, PostgreSQL, MongoDB, Docker, DigitalOcean, AWS

PROFESSIONAL EXPERIENCE

- **citrus** Toronto, ON
Founder & Full-Stack Engineer Jan 2025 – Present
 - Validated product-market fit for a technical interview prep platform by conducting **20+** **user** interviews with engineers across junior to senior career stages, identifying key pain points that shaped **MVP** roadmap.
 - Designed and launched a **waitlist-driven onboarding system** using **React**, **TypeScript**, and **Supabase**, acquiring **70+** **early users** and validating market demand pre-launch.
 - Architected a **full-stack AI** interview prep platform using **React**, **TypeScript**, **Supabase**, and **OpenAI APIs**, defining system design, data models, and API contracts across frontend and backend layers.
 - Developed structured **REST APIs** for core platform logic, including technical assessments, code submission, and real-time result handling.
- **Tailed** Montreal, QC
Full-Stack Engineer Sept 2024 – Nov 2025
 - Engineered **5+** **end-to-end product features** integrating a **React** frontend with a **Node.js/Express REST API**, implementing JWT-based authentication and role-based access control to ensure secure, scalable data handling
 - Integrated backend services with a modular **React** frontend, improving UX responsiveness and reducing client-side error rates by **35%**
 - Partnered with sales and business stakeholders to define and prioritize 3 customer-requested features, shipping them within a 6-week sprint cycle and contributing to a measurable improvement in customer retention.
- **OpenText** Waterloo, ON
Software QA Automation Developer May 2023 – Aug 2023
 - Automated end-to-end UI and integration tests for **Asset Importer**, executing **150+** **Selenium** test cases to verify multi-tenant asset pipelines used by global clients likend-to-end issues, contributing fixes and automated checks to maintain **Node.js** for CI validation of **React.js** components, reducing QA turnaround time and boosting release confidence across 30+ internal projects.
 - Improved code reliability through modular, object-oriented patterns across QA utilities, strengthening the **CI/CD pipeline** and preventing regressions.
 - Partnered with developers to debug full-stack issues, contributing fixes and automated checks that maintained release quality across integrated services.

PROJECTS

- **AI Scheduler App:** Built a full-stack AI shift-scheduling platform for restaurant managers using **React**, **Supabase**, and **FastAPI**, integrating an LLM-powered suggestion engine that reduces manual scheduling time by automating conflict detection and availability matching across **10+** **restaurants**.

EDUCATION

- **University of Waterloo** Waterloo, ON
B.A.Sc. Chemical Engineering Sept 2019 – Aug 2024
 - **Relevant Coursework:** Data Structures & Algorithms, Numerical Methods and Process Optimization
 - Developed a strong quantitative foundation in mathematical modelling, computational problem-solving, and systems optimization, later applied to full-stack software engineering.
